

Lab 1: NHANES Data Wrangling

Overview

In this lab you will learn how epidemiologists access and prepare large survey datasets in R, using NHANES as the example: importing, merging, cleaning, and summarizing. Your TA will walk through the worked solution during the session.

The goal of this lab is to get your toolchain working end to end. By the time you leave the room, you should be able to open an R Markdown file, run it, and produce a finished document.

Materials

- **Exercise instructions:** Exercise 3(a) Lab
- **Worked solution:** Exercise 3(a) Solution
- **AI-assisted walkthrough:** Exercise 3(a) AI Vibe

Your task

1. Follow along as the TA explains the worked solution.
2. Run the R Markdown file yourself, as a group, on your own laptop.
3. Put your **group name and the first names of everyone present** in the `author:` field at the top of the file.
4. Add `sessionInfo()` in a final code chunk.
5. Knit to **PDF or HTML** and submit that one file before the lab ends.

No written explanations are required. If you get stuck, ask the TA in the room — that is what the session is for.

Deliverable

- **One file per group:** the knitted PDF or HTML.
- **Due:** end of the lab session (Thu Sept 17).

Grading: Complete / Incomplete

You receive **Complete** if the document knitted without errors, your group name and members are in it, and it was submitted before the lab ended. Only members present in the room receive credit.
